Breakdown by country of origin (Tables 3 and 4) reveals that 50 per cent of the new establishments originated outside Canada. Those with affiliation or control in the United States numbered 642 (over 64 per cent of which were in Ontario), accounting for 64.1 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Machinery Industries, followed by the Electrical Products Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Metal Fabricating Industries. Distribution of the new establishments with foreign origin by provincial location, similar in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

INDEX

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report includes all new manufacturing establishments in Canada that have come to our attention since the last issue was published in December, 1971. It contains names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industry group. The industrial breakdown follows the concepts of the revised 1970 Standard Industrial Classification.

This listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change in ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of manufacturing operations.

The next issue of this report will be the supplement dated December, 1972.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1962-1971

Because of the 1970 revision of the Standard Industrial Classification, tabular information in the following section has been compiled for the full ten year period to reflect industrial breakdowns on the 1970 base, thus allowing realistic comparison and establishing year-to-year trends. The tables show the number of manufacturing establishments which reported for the first time to the annual Census of Manufactures and are still actively engaged in manufacturing. Data are obtained from a continuing survey of prospective new firms and include those establishments which have reported that manufacturing operations began during the year specified. Data for the later years may be revised when reports to the annual Census of Manufactures are received revealing more detailed information.

Comparison of data in previous issues of this publication based on the 1960 Standard Industrial Classification shows an increase in the Rubber and Plastics Products Industries, and a decline in the Miscellaneous Manufacturing Industries. This is largely due to the revision in the 1970 Standard Industrial Classification structure in which some of the manufacture of plastics products was transferred from Miscellaneous Manufacturing to the new Rubber and Plastic Products Industries.

Beginning with the year 1963 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase at that time.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 21.1 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 35.5 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 7.6 per cent and 10.4 per cent respectively.

Regional distribution (Tables 1A to 1J) shows the heaviest concentration of new manufacturing establishments in Ontario followed by Quebec, which accounted for 37.5 and 30.4 per cent respectively, followed by British Columbia with 13.7 per cent and the Prairies and Atlantic Regions with 12.7 per cent and 5.5 per cent respectively. This regional pattern is followed generally in all industries except Clothing and Wood Industries. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 73.5 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Ontario, Quebec and the Prairie Provinces also showing a large number of new businesses in this field. In the Atlantic Region the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 52.5 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 50 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Tables 3 and 4) reveals that 763 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 642 (over 63 per cent of which were in Ontario), accounting for 84.1 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Machinery Industries followed by the Electrical Products Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Metal Fabricating Industries. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1972, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises 1,385 businesses that have not been operating before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1973.

NEW MANUFACTURING ESTABLISHMENTS
IN CANADA

This report includes all new manufacturing establishments in Canada that have come to our attention since the last issue was published in December, 1972. It contains names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industry group. The industrial breakdown follows the concepts of the revised 1970 Standard Industrial Classification.

This listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change in ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of manufacturing operations.

In addition to late release of this issue, you will note that the tabular material normally published at mid-year has been omitted.

Recently our source for new manufacturing establishments has had to be changed from the registration of businesses with the Unemployment Insurance Commission to the opening of new payroll deduction accounts with the Department of National Revenue, Taxation. This shift has resulted in some discontinuity. We are presently reconciling data from the new source with past trends from the UIC base and anticipate publishing tabular material at an early date as a supplement to a future issue.

The next issue of this report will be the supplement dated December, 1973.

NOUVEAUX ÉTABLISSEMENTS MANUFACTURIERS
AU CANADA

Ce bulletin comprend tous les nouveaux établissements manufacturiers qui nous ont été signalés depuis la dernière publication en décembre 1972. Il présente les noms, adresses et principaux produits de tous les nouveaux établissements (sans distinction de taille) qui ont ouvert leurs portes récemment ou qui doivent le faire dans un proche avenir. Afin de permettre une analyse des nouveaux arrivants dans un domaine ou une région en particulier, les noms des firmes ont été classés par industrie et par province à l'intérieur de chaque groupe d'activités économiques. La répartition industrielle répond aux concepts de la révision de 1970 de la Classification des activités économiques.

Cette liste comprend les noms des firmes qui n'existaient pas auparavant, ainsi que les nouvelles succursales de firmes existantes, et qui ont toutes déclaré travailler dans le domaine manufacturier. Les bureaux de vente et les nouveaux services d'entreposage séparés sont exclus. Un changement de propriétaire ne constitue pas une nouvelle firme dans la mesure où il s'agit toujours des mêmes activités.

Rien ne prouve que ces nouvelles firmes soient ou non productives actuellement et l'on devra considérer les renseignements compris dans ce bulletin en fonction de ce fait. Nous avons mentionné que chacune des firmes inscrites a récemment commencé à produire ou doit le faire incessamment; ceci ne doit pas être considéré comme sûr tant que les données du recensement annuel des manufactures n'auront pas été collectées.

En plus du retard de cette dernière publication, vous noterez que le tableau normalement publié au milieu de l'année a été omis.

Récemment, nos sources d'informations pour l'enregistrement des nouvelles entreprises manufacturières d'avec le bureau de la Commission d'Assurance Chômage, ont été changées, du fait que maintenant à chaque enregistrement d'une nouvelle entreprise, le bureau du Revenu National, département de taxation, ouvre un numéro de compte pour les déductions à la source. Ce changement a eu pour résultat quelques discontinuités. Nous sommes présentement à concilier les nouvelles sources d'information d'avec les anciennes basées sur la Commission d'Assurance Chômage, et anticipons une nouvelle publication tabulaire prochainement comme supplément à notre futur numéro.

La prochaine publication de ce bulletin aura lieu en décembre 1973 sous forme de supplément.

NEW MANUFACTURING ESTABLISHMENTS
IN CANADA

This report is published as a supplement to the June, 1973 issue and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principle products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises 999 businesses that have not been operating before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be published for the period ending June 1974.

NOUVEAUX ÉTABLISSEMENTS MANUFACTURIERS
AU CANADA

Ce bulletin constitue un supplément à la publication de juin 1973, et présente tous les nouveaux établissements manufacturiers au Canada qui nous ont été signalés depuis cette date. Il contient les noms, adresses et principaux produits de tous les nouveaux établissements (sans distinction de taille) qui ont ouvert leurs portes récemment ou qui doivent le faire sous peu. Les noms des firmes ont été groupés par industrie et par province à l'intérieur de chaque groupe d'activités économiques.

Cette liste comprend 999 entreprises qui n'existaient pas auparavant, ainsi que les nouvelles succursales d'entreprises déjà existantes, et qui ont toutes déclaré travailler dans le domaine manufacturier. Les bureaux de vente et les nouveaux services d'entreposage séparés sont exclus.

Rien ne prouve que ces nouvelles firmes soient ou non productives actuellement et l'on devra considérer les renseignements compris dans ce bulletin en fonction de ce fait. Nous avons mentionné que chacune des firmes inscrites a récemment commencé à produire ou doit le faire incessamment; ceci ne doit pas être considéré comme sûr tant que les données du recensement annuel des manufactures n'auront pas été collectées.

La prochaine livraison de ce bulletin portera sur la période terminée en juin 1974.
